

176 T4 - Four Thermocouple Temperature Logger Overview

The Testo 176 T4 data logger can measure the temperature of four different measurement points simultaneously. It also has a super size memory for up to 2 Million readings, This gives you the freedom to read out the logger data at longer intervals, even when measuring cycles are shorter. An exceptionally wide measurement range and is compatible with a number of different thermocouple elements making it ideal for professional use in a variety of different fields.

Features

- 4 Channel measurements (4 Thermocouple probes) for external temperature monitoring
- Ability to measure Extreme High / Low temperatures
- Large memory, 2 Million Readings
- Data transfer possible using the USB port or SD card (Optional)
