

Torque Multipliers Overview

Warren and Brown Torque Multipliers are designed to easily tighten and loosen fasteners that have high torque values. Utilising relatively high torque ratios always ensures that only a comparatively low input torque is required using 1/2" drive torque wrenches making working in difficult areas easier and more comfortable for the operator. Torque multipliers must be used with an appropriately set torque wrench to avoid overload damage. To extend the life of the torque multiplier, it is best to operate within 80% of the maximum torque output.
